"In the tools, as in the instruments, what matters is the artist"

Cover Letter

Hi, I'm Pablo Slavkin, I'm an electronic engineer from an electromechanical technician base.

I've more than 15 years of experience in the electronic industry working in a very abroad technology.

I'd began taking the client requirement and end with the fully working prototype, I mean schematics, parts selection, PCB layout, bare firmware, bootloader, RTOS, drivers, Linux embedded, device drivers, PCB batch production, 3D cases modeling in sync with PCB, and why not, some companion software like web pages, frontend and backend services, databases, WebSocket's, python/bash scripting and so.

During the dev phase I use to use a whole stack of up-to date software tools like git, agile methodologies, unit testing, docker, GitLab/GitHub CI/CD with custom runners and if it deserves hardware in the loop too.

Recently I've worked as a lead of small electronics teams with very good results.

I've many years of experience in mounting PCB's at my own lab, using my own p&p, reflow-oven, stencils, etc. I'm very good with CNC machines, laser cutting, and also very passionate about 3d printers, I've one of each at my lab and use them regularly.

I've been working in the robot/cnc industry from the past 5 years.

Recently, in 2021, I've got a master's degree in embedded system from the UBA university.

I'm interested in a new challenge where I'd share my expertise and knowledge and at the same time, move my professional career much further.
